

Disaster Risk Reduction

LESSON LEARNED FROM MOUNT MERAPI: PLANNING TOWARDS DISASTER RESILIENCE

“ASIAN CONFERENCE ON DISASTER RISK REDUCTION 2016”

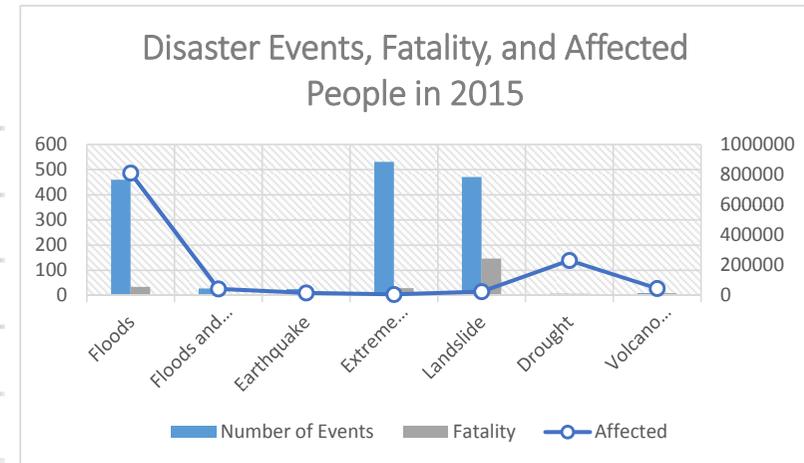

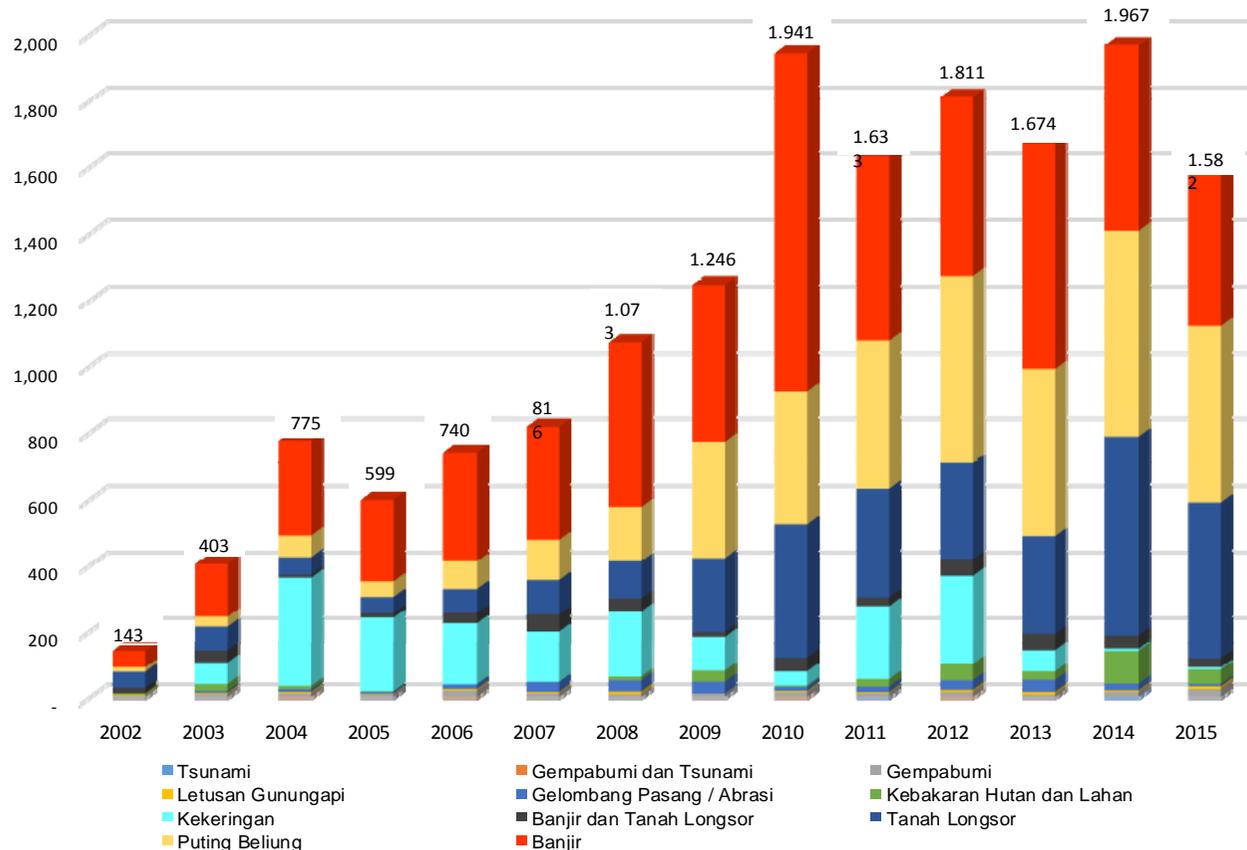

DR. Raditya Djati

Deputy Director for Prevention
Directorate for Disaster Risk Reduction
The National Authority for Disaster Management

Phuket 25-26th of February 2016

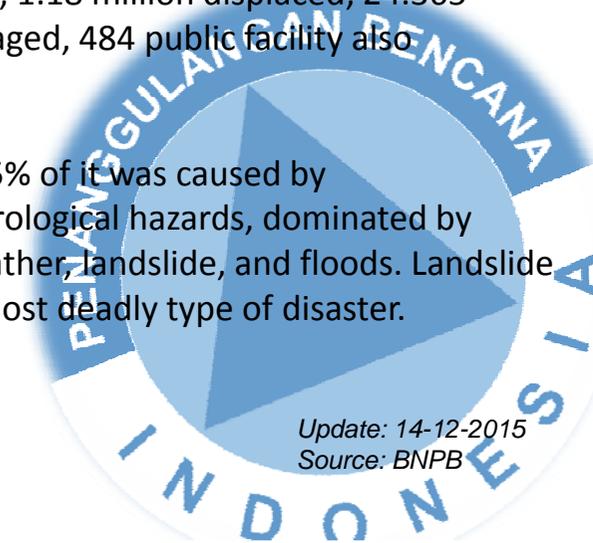

Disaster Trend in Indonesia 2002-2015

Of 1,582 disaster event in 2015, 240 people were loss their life; 1.18 million displaced, 24,365 houses damaged, 484 public facility also damaged.

Morethan 95% of it was caused by hydrometeorological hazards, dominated by extreme weather, landslide, and floods. Landslide still be the most deadly type of disaster.

Update: 14-12-2015

Agenda of Discussion for Today

Indonesian issues on Volcanoes

Lesson Learned from Mount Merapi

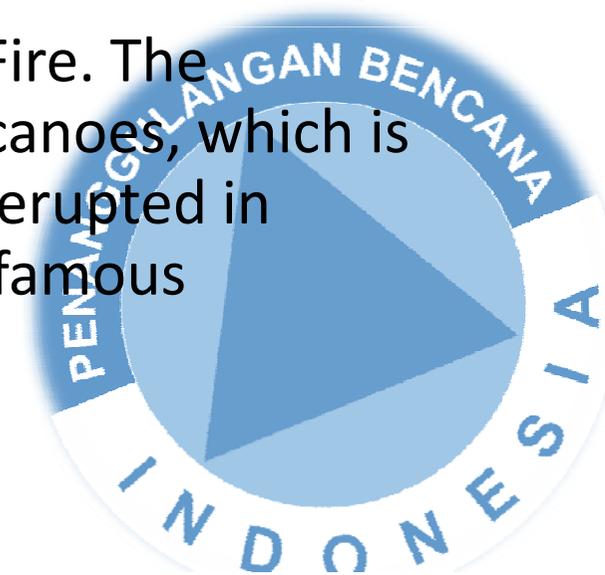

Implementation on HFA and Post Sendai Commitment on SFDRR 2015-2030

National Action Plan on DRR in Indonesia

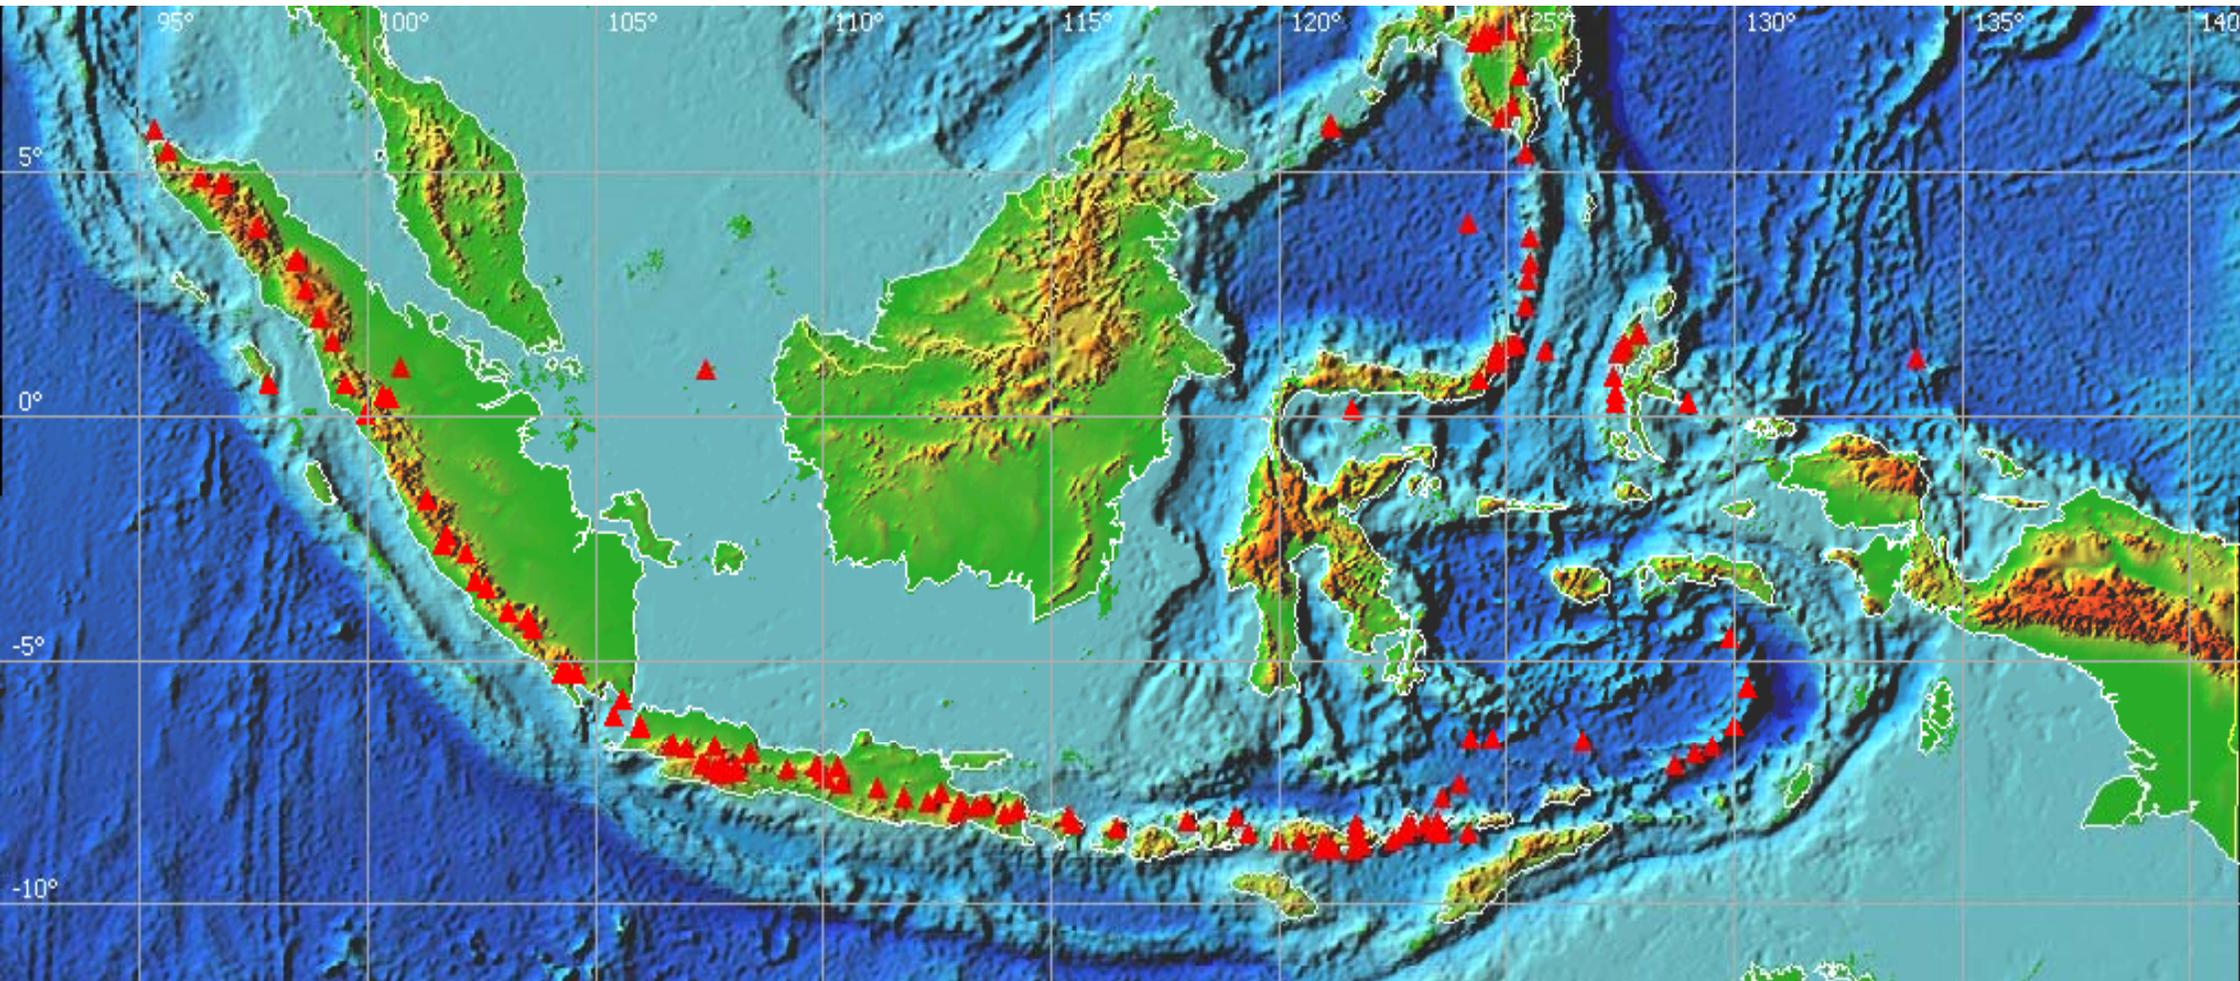

#1 INDONESIAN ISSUES ON VOLCANOES

- The Indonesian archipelago is the result of complex tectonic plate collision involving four different plates. Subduction of the continental Indo-Australian plate beneath the Eurasian plate formed the main Sunda-Banda volcanic arc stretching from Sumatra to the West, through Java, Bali, Nusa Tenggara Islands till Banda to the East.
- Volcanoes in Indonesia are part of the Pacific Ring of Fire. The Indonesian archipelago contains about 130 active volcanoes, which is more than any other country. About 76 of them have erupted in historical times. It contains some of the world's most famous volcanoes like Toba, Krakatau, Tambora, and Merapi.

Distribution of Volcanic Activity in Indonesia

Historic Data on Great Volcanic Eruption Event

Rank	Death Toll	Event	Location	Date
1.	92,000	Mount Tambora (see also Year Without a Summer)	Indonesia	April 10, 1815
2.	36,000	Krakatoa	Indonesia	August 26–27, 1883
3.	29,000	Mount Pelée	Martinique	May 7 or May 8, 1902
4.	25,000	Mount Vesuvius	Pompeii and Herculaneum, Italy	August 24, 79 AD
5.	23,000	Nevado del Ruiz	Colombia	November 13, 1985
6.	15,000	Mount Unzen	Japan	1792
7.	10,000	Mount Kelut	Indonesia	1586
8.	9,350	Laki . Killed about 25% of the population (33% were killed about 70 years before by smallpox)	Iceland	June 8, 1783
9.	6,000	Santa Maria	Guatemala	1902
10.	5,115	Mount Kelut	Indonesia	May 19, 1919

#2 Lesson Learned from Mount Merapi

Photography by Raditya Jati, 2010

ACTIVE VOLCANOES AROUND MERAPI

Merapi stratovolcano (2965 m) is located in Java, Indonesia, 30 km north of the city of Yogyakarta.

F. Lavigne, J. Morin, Surono (eds.), The Atlas of Merapi volcano, First Edition, 2015

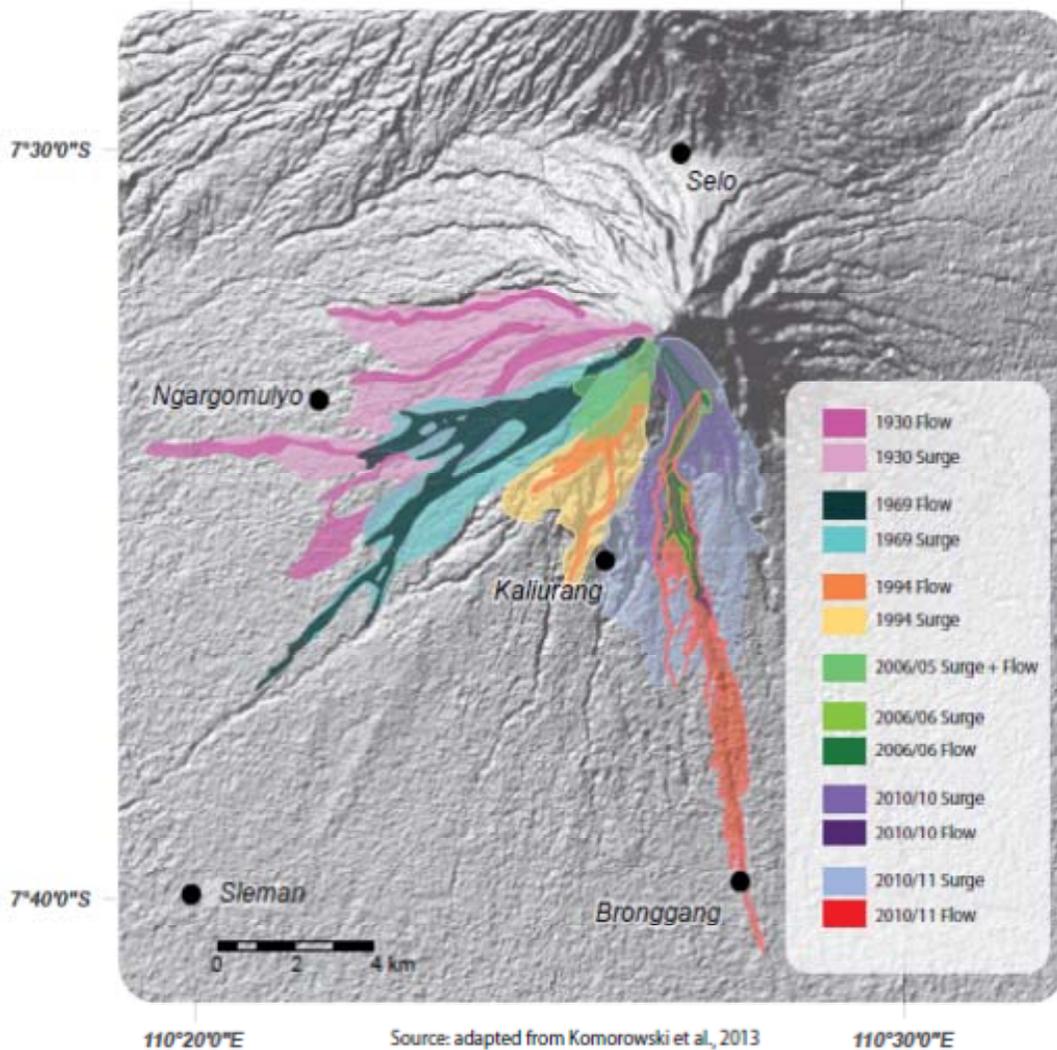

Disaster Occurred in Yogyakarta

- In 2006 an earthquake claimed more than 5000 victims, and damaged almost 380,000 units of private and public infrastructure.” After the earthquake, the Mount Merapi erupted and had the impact on the northern side of Yogyakarta City
- On 25th October 2010 Mount Merapi erupted, releasing larva and ashes for over a week, the volcano’s largest eruption since 1870.
- The death toll was 353, and more than 350,000 people were evacuated.

MAIN PYROCLASTIC DEPOSITS SINCE 1930

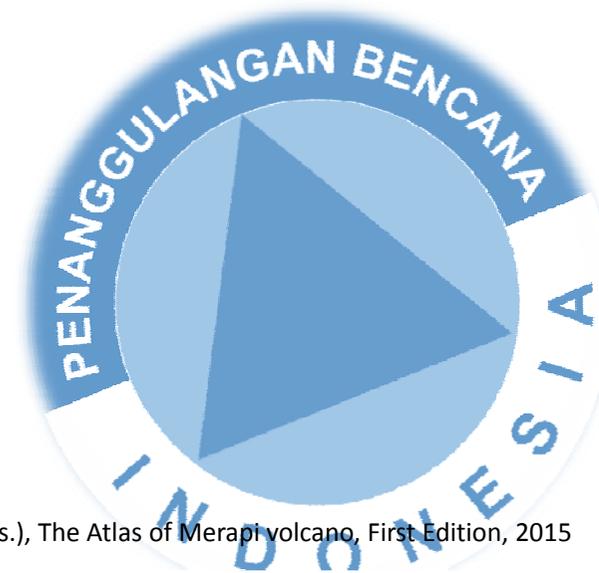

MAJOR MERAPI ERUPTIONS SINCE 1872

Date of eruption	VEI	Volume ejected (million m ³)	Victims	Injured	Evacuated or made homeless
1872	4		200		
1904	2		16	45	3 000
1920	2	5	35		1 000
1930	3	26	1 369		13,000
1954	2	20	64	57	3 000
1961	3	29.4	6	6	8 000

#3 Implementation on HFA and Post Sendai Commitment on SFDRR 2015-2030

- Indonesia is extremely disaster prone: between 1980-2009 Indonesia suffered 312 natural disasters, this ranking fourth highest in the Asian Pacific nations. Its death total, however, was the second highest at approximately 191,000 people, and the country suffered economic losses of some 22.5 billion US\$.”

Disaster Risk Governance has been developed

Policy and Regulation

- Law No. 24 year 2007
- Government Regulation No. 21, 22, and 23 year 2008.
- Regulations of the Chief of BNPB
- Local Regulation on Disaster Management at Provincial and District/City Level

Institutions

- BNPB established in 2008
- BPBD at Provincial and District Level

Planning

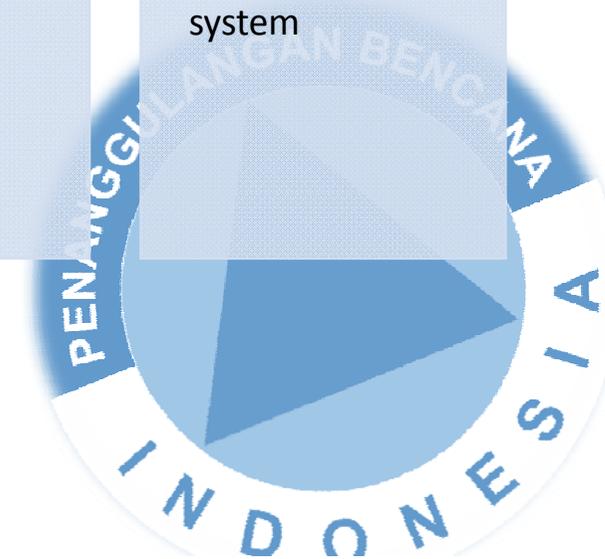

- National Disaster Management Plan
- DRR Action Plan
- Local DM Plan
- Master Plan of 12 hazards

Finance

- National Budget for DM has been increased.

Multistakeholder Collaboration

- National and Local Platform of DRR
- Active role of CSOs in DRR
- Establishment of cluster coordination system

- First of all the Hyogo Framework has encouraged Indonesia to shift its approach in disaster management from response-oriented to disaster risk reduction. Prior to the HFA, disaster in Indonesia was managed by a unit under the Vice President's Office, which dealt mostly with emergency response and post-disaster recovery. After HFA, Indonesia focuses more on efforts to reduce risks and build resilience to disaster.
- Secondly, the four priorities of the HFA have shaped Indonesian national disaster management system, with its focus on: (1) legislation, (2) planning, (3) institution, (4) budget, and (5) capacity development at all levels.
- With regards to legislation, in 2007 Indonesia enacted its first Disaster Management Law, Law No. 24 of 2007. It has been subsequently followed by a series of presidential and government decrees and other subsidiary legislations at all government levels down to the district/city level.

- In terms of planning, as the focus is more on DRR, Indonesia launched its first national DM Plan 2010-2014 in late 2009. It was subsequently followed by provincial and district/city governments that issued their Local DM Plans. Currently all provinces have their DM Plans and more than 80 districts and cities (out of a total of 506 districts and cities) have developed their DM Plans.
- Related to the institutional arrangement, the Law No. 24 of 2007 has mandated all levels of government to have their independent DM agencies. At the national level we have BNPB that was established in 2008. At present all provinces have already had their own DM Agencies and 84% of the districts and cities have established DM Agencies.

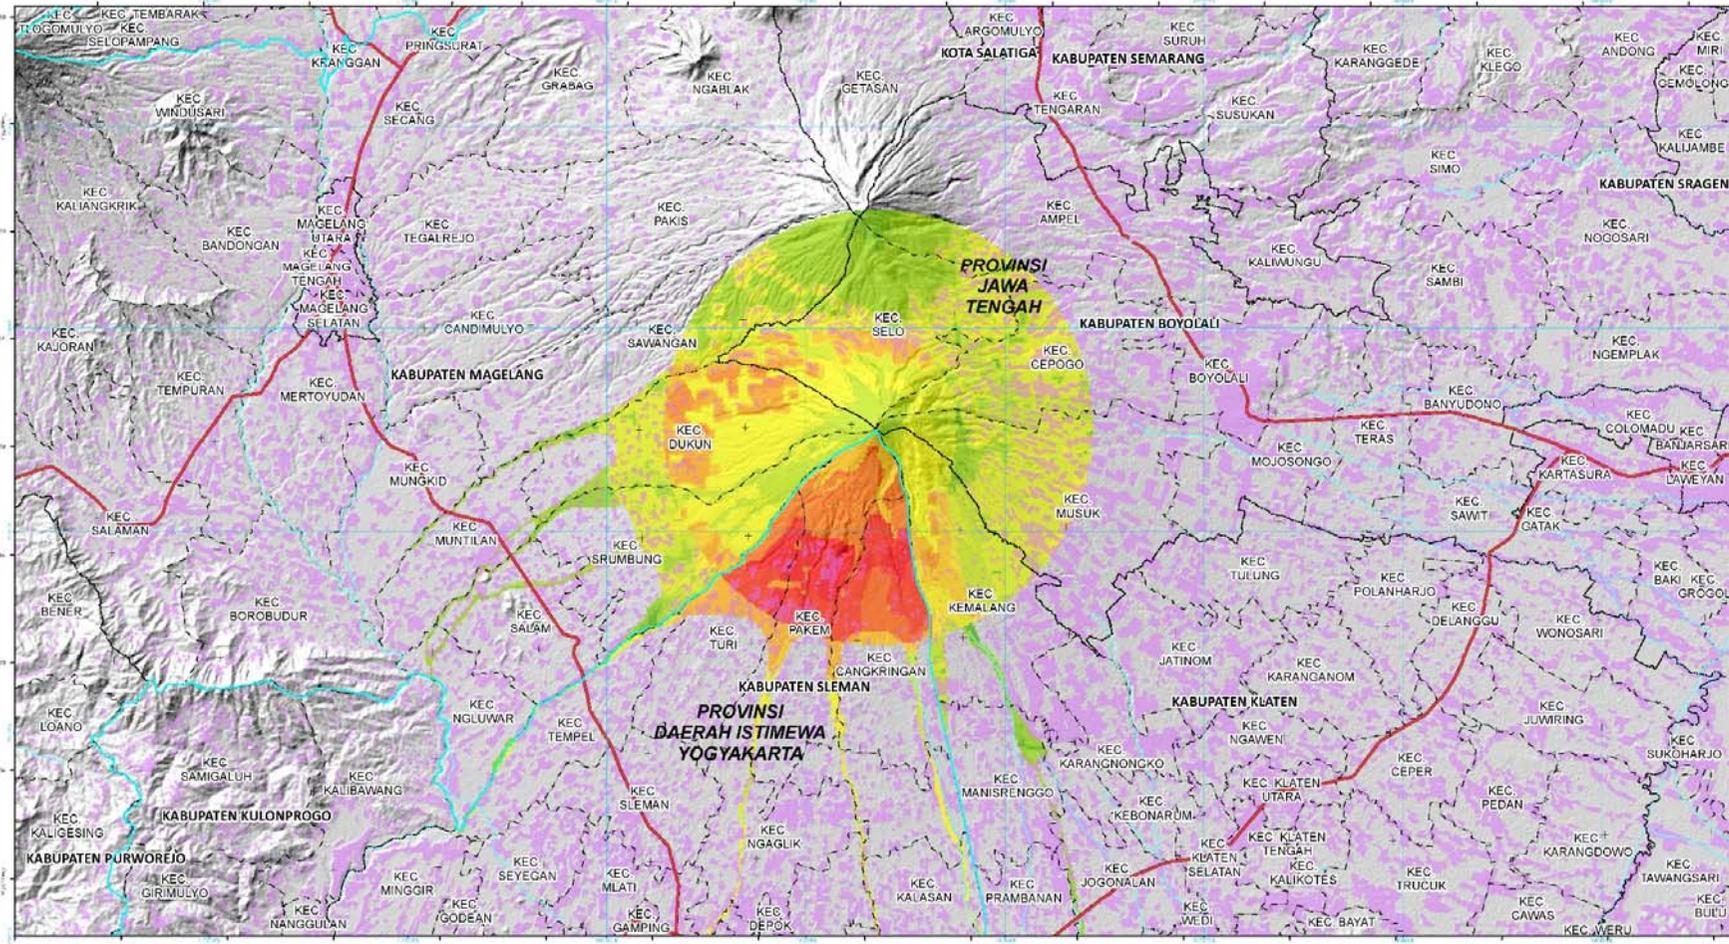

- In terms of budget, in the past 10 years budget for DRR has shown a significant increase. A recent study by the National Planning Board, Bappenas, currently the level of budget for DRR in sectoral line ministries has exceeded 1% of the total national budget.
- With regard to Priority 2, 3 and 5 of HFA, progress has been achieved in risk mapping, Early Warning System, disaster education, enhancement of science and technology for DRR and preparedness for response. Progress has mostly been achieved in and around bigger cities in the country's main islands, particularly those that have strong tertiary education institution and research centers.

After Sendai for Priority #1 of SFDRR

The availability of detailed risk assessment for multi hazard in all area

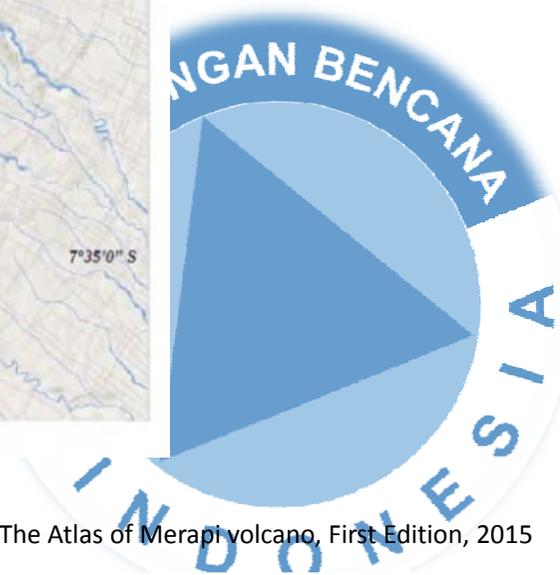

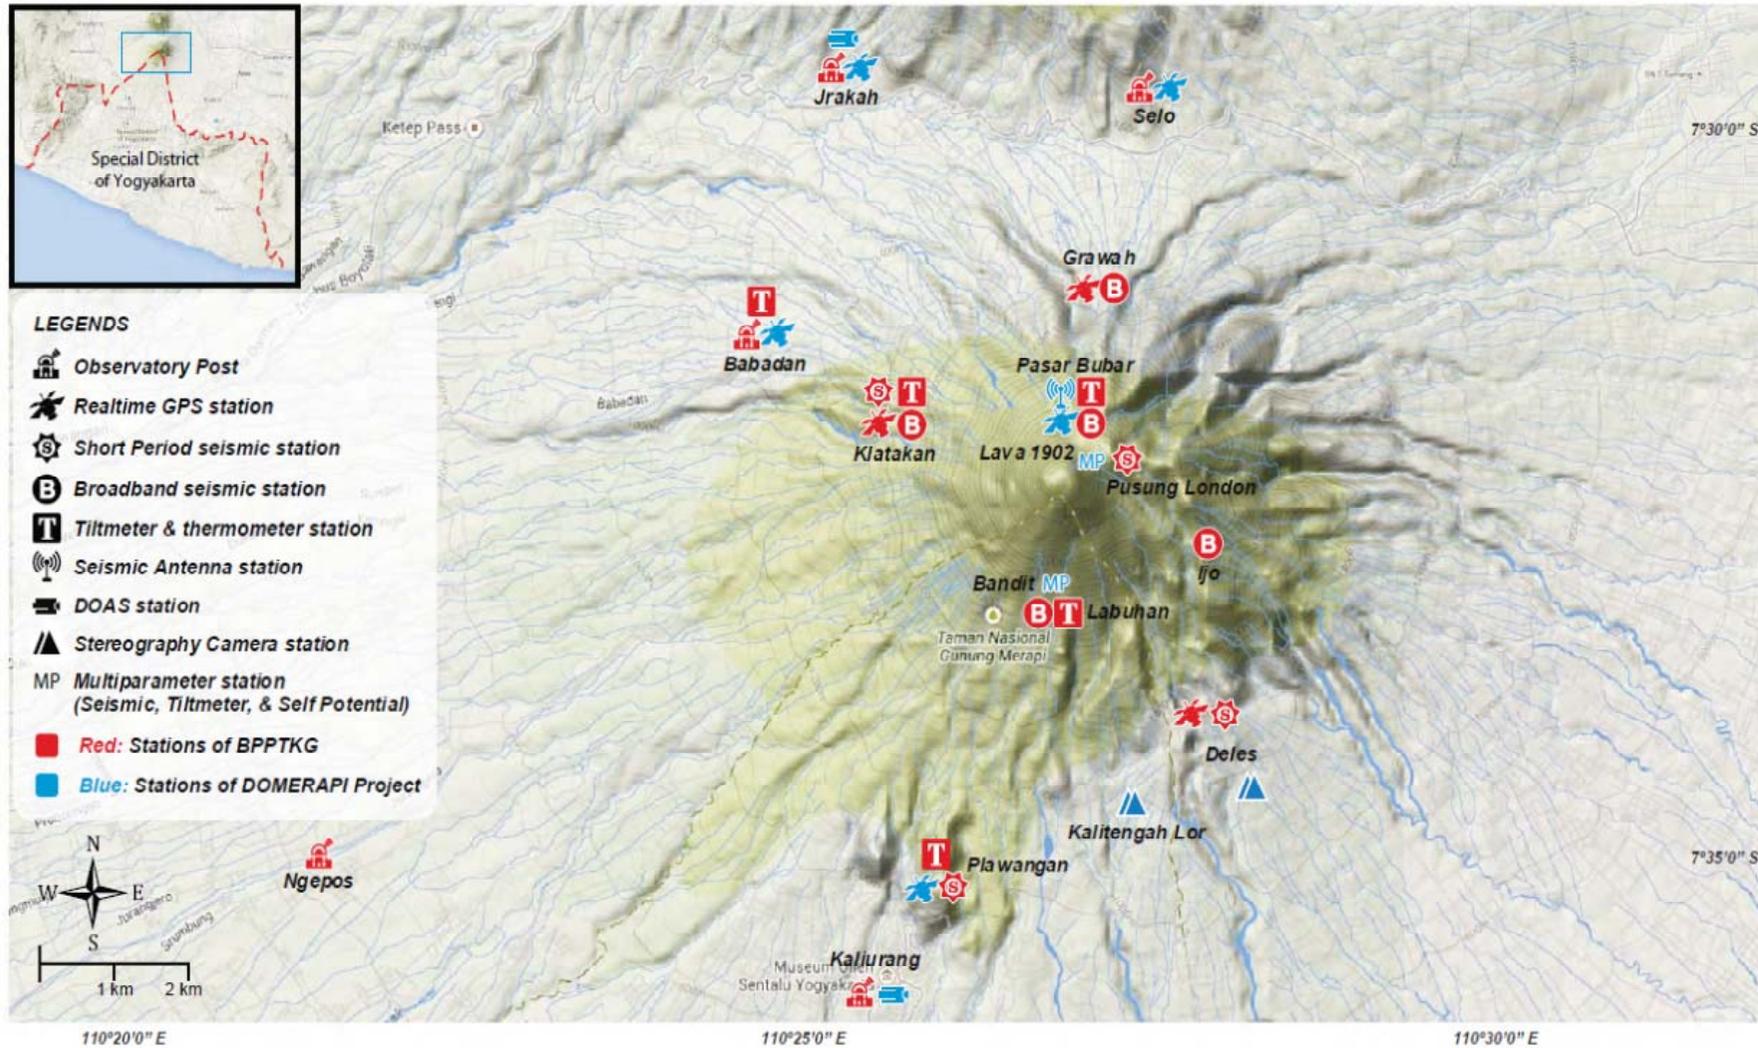

Risk assessment became the basis for development

The use of semi-detailed risk assessment as a policy consideration, DRR and investment

All spatial planning policies are using risk assessment as basis consideration

THE MAP OF MERAPI MONITORING NETWORK IN 2014

#4 National Action Plan on DRR in Indonesia

- Issues related to disaster risk reduction have been specifically referred to in the **new middle-term development plan**. In the part of RPJMN that elaborates the general direction of **development in 2015-2019**
- Disaster management and risk reduction are detailed more in priority number seven regarding effort to achieve economic independence. Under sub-agenda IV sustainable natural resources and environmental management, and disaster management, it is mentioned that the target of development in disaster management and disaster risk reduction is **reduction in Disaster Risk Index in growth centers** that are located in hazard-prone areas, through (1) **Mainstreaming of disaster risk reduction into sustainable development framework at the national and local levels**, (2) **Reducing vulnerability to disaster**, and (3) **Enhancement of the capacity of the national government, local governments and all communities in disaster management**.

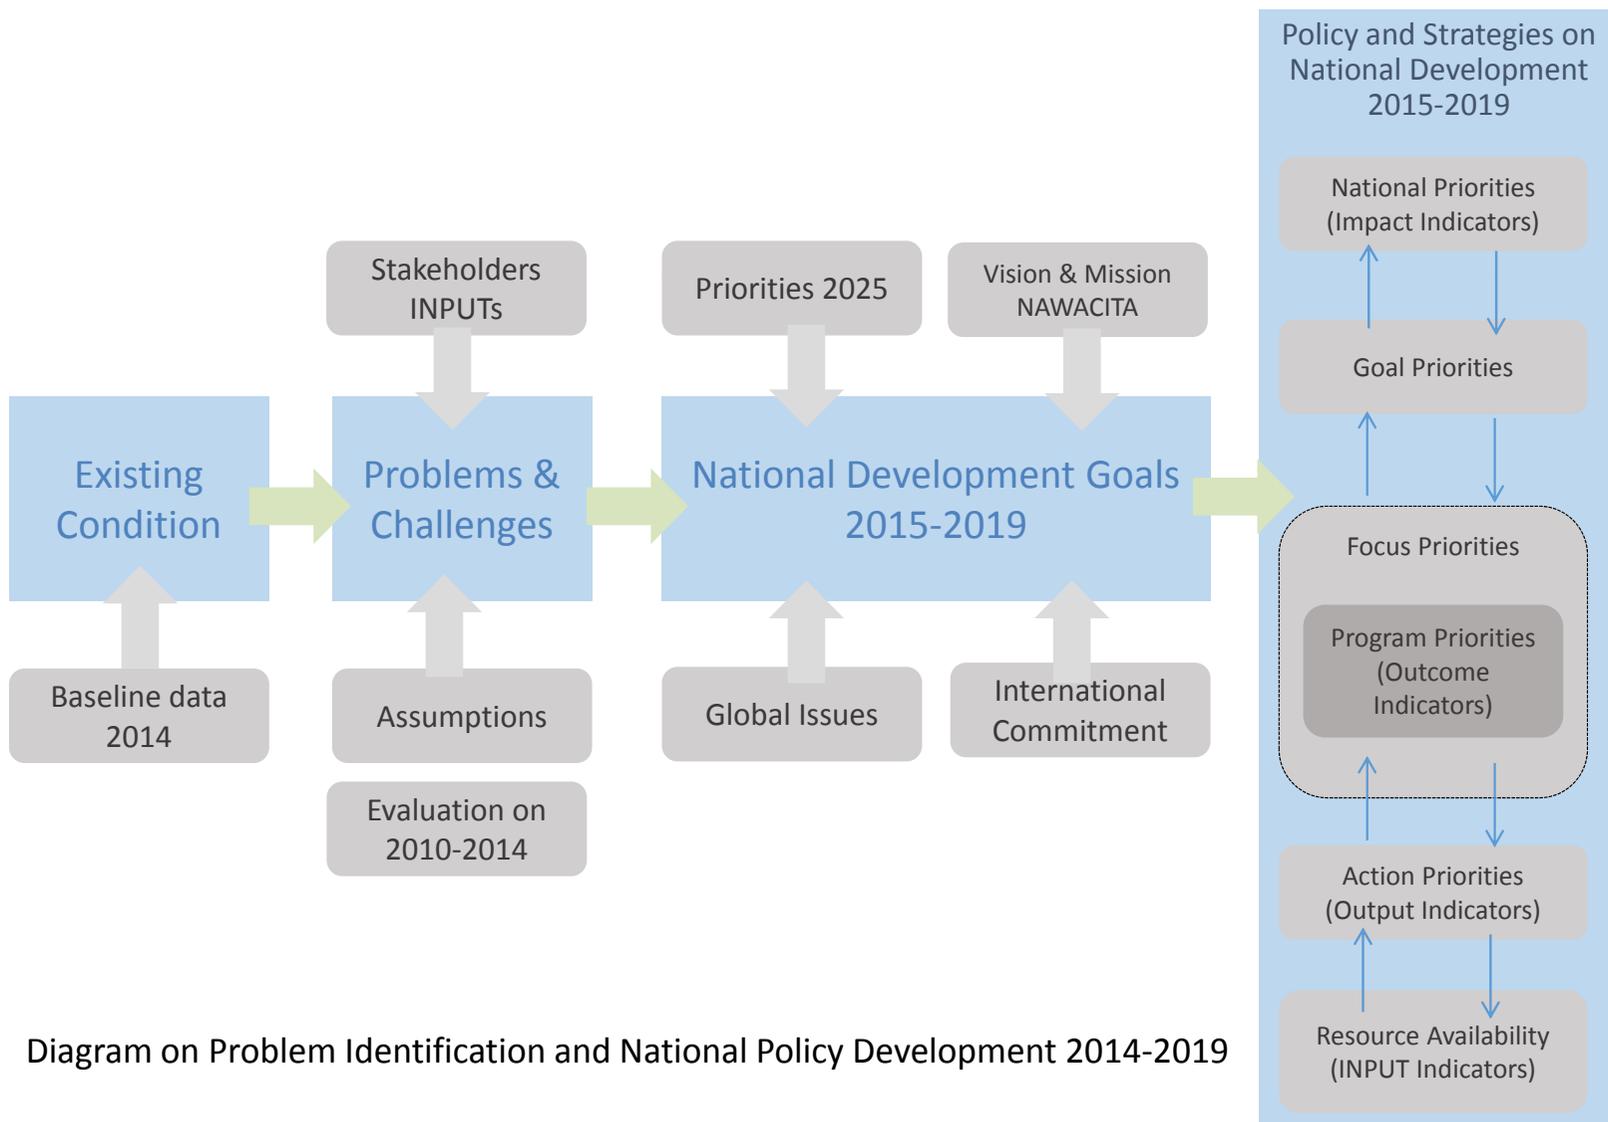

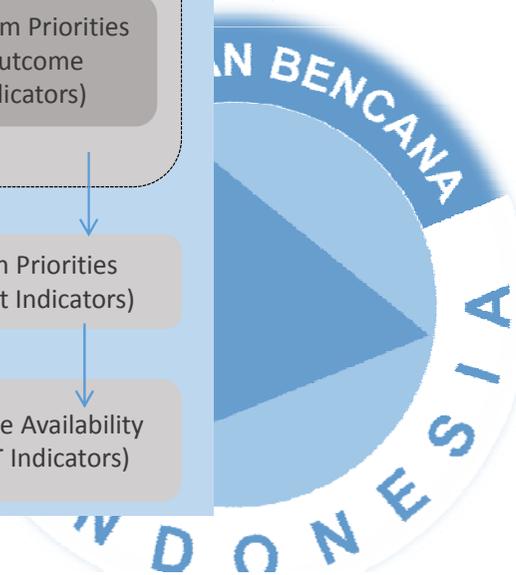

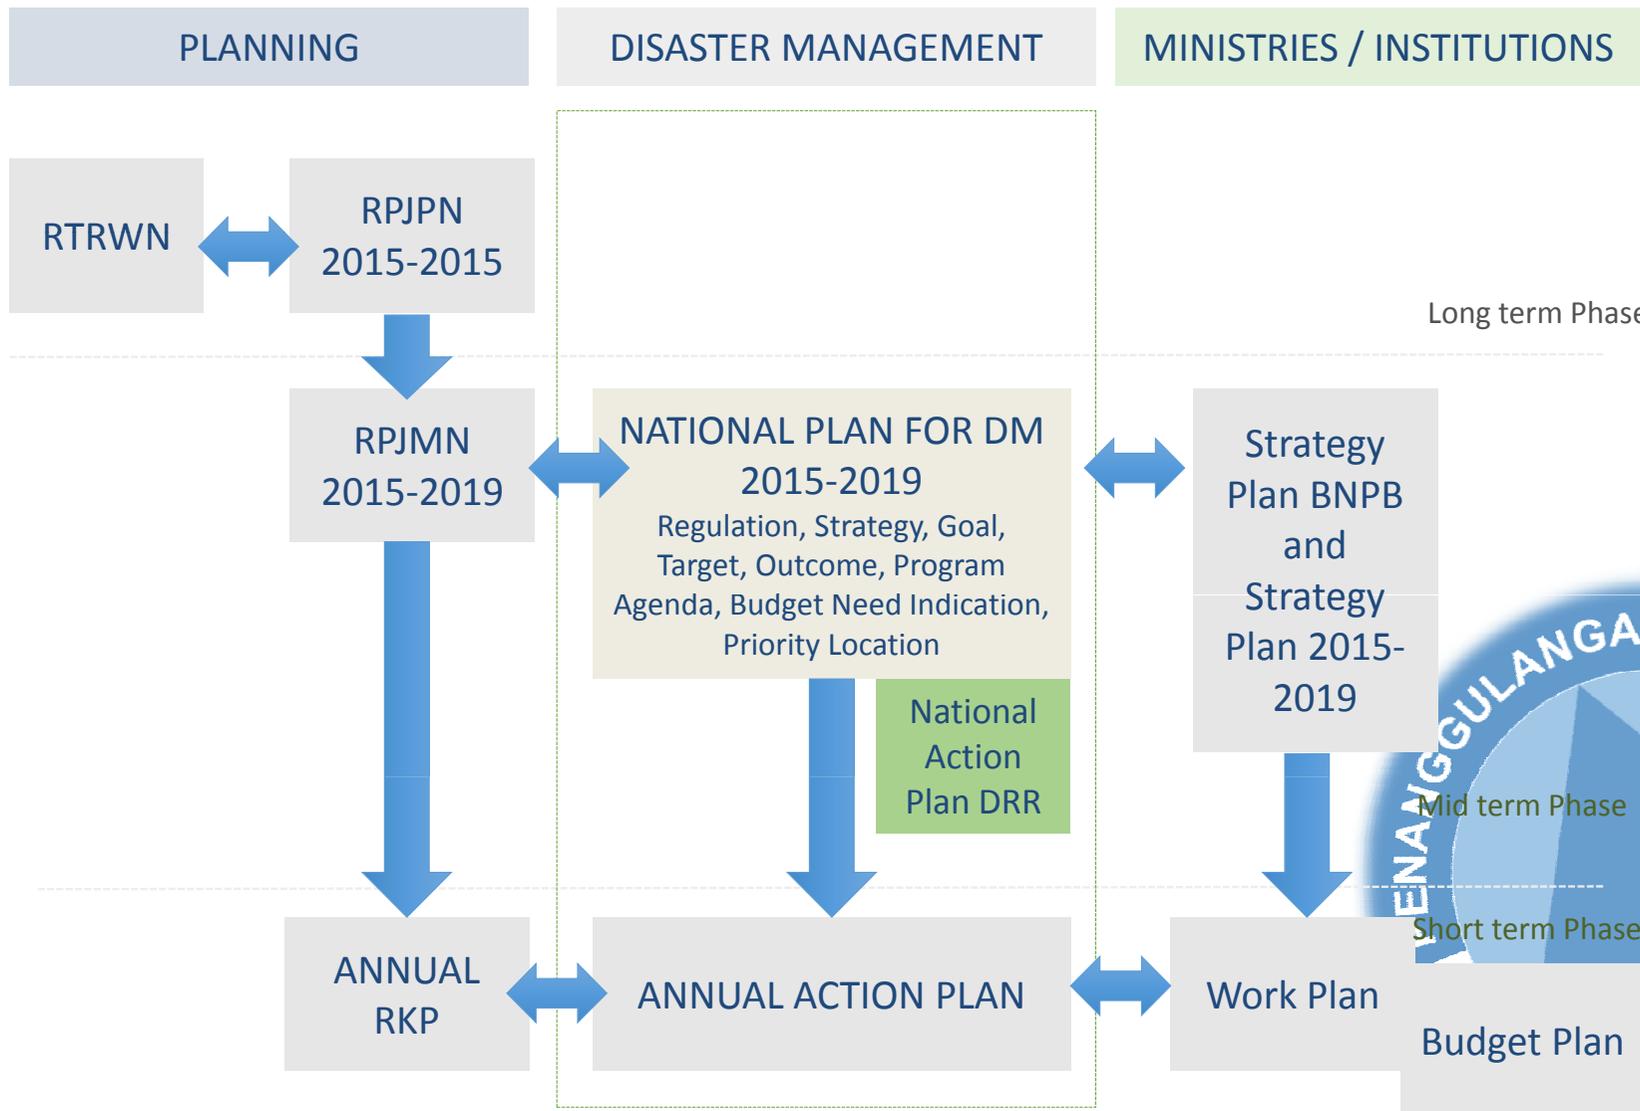

Diagram on Problem Identification and National Policy Development 2014-2019

National Action Plan on DM 2015-2019

7 Priorities and 36 Action Plan

1. Strengthening Regulation on DM

- Revised of the National Law No 24/2007 on Disaster Management
- Synergized the regulation framework of disaster management implementation
- Improvement of technical regulation on Disaster Management
- Enhancement of implementation framework regulation on disaster management

2. Mainstreaming Disaster Management on Development Planning

- Mainstreaming Disaster management and Climate change adaptation to national development
- Monitoring, evaluation, and review of National DM Plan related with other integrated sectors
- Improvement of Information system to National Action Plan implementation

National Action Plan on DM 2015-2019-cont.

3. Improvement of stakeholders partnership

- Improvement of community capacity and its implementation on disaster resilience focusing on local wisdom, climate change adaptation, gender, and vulnerable group
- Enhancing partnership for sustainability
- Strengthening National DRR Forum, local, and thematic as a sharing media for DM
- Strengthening and improvement of the education institution and expert association to educate and build culture of disaster awareness
- Improvement of volunteer's role on DM

4. Good governance on DM

- Fulfill the Standard of Minimum Services on DM
- Strengthening capacity of institution, human resources, and community
- Strengthening the capacity of infrastructure in DM
- Management and accountability support for technical implementation in DM

5. Effectively to improve prevention and mitigation

- To build national institution and community on prevention and mitigation
- Strengthening the implementation on research and technology
- Updating the disaster risk analysis with information system at national level
- Optimizing resources and spatial planning for land planning on prevention and mitigation
- Disaster mitigation management on CCA considering the vulnerable groups and local wisdom

6. Preparedness and emergency response improvement

- Integration DRR and Emergency Response
- EWS development on multirisk of disasters
- Spreading the information system networks
- National framework on emergency response development
- Development of preparedness capacity on national disaster
- Acceleration on infrastructure and logistic on emergency response

- Acceleration on determining situation state mechanism on emergency response
- SRC improvement on DM in Indonesia
- Improvement with international partnership on emergency response at national level
- Strengthening and partnership on emergency response at local level
- Capacity improvement on emergency response

7. Capacity improvement on disaster recovery phase

- Strengthening the mechanism and support of recovery phase from international, national, and local level
- Integration of DRR and disaster recovery phase
- Optimizing the rehabilitation and reconstruction on every sectors
- Character building and resilient community on disaster readiness

Thank You
