

JAXA

JAXA Program for Disaster Monitoring and Information Sharing

Sentinel Asia Project

Asian Conference on Disaster Reduction 2007
 25–27 June 2007
 Astana, Republic of Kazakhstan
 Takashi Moriyama, Ph.D
 Japan Aerospace Exploration Agency (JAXA)

Japan has wide variety of natural disasters

- Earthquakes
- Tsunamis
- Volcanic Eruptions
- Typhoons
(July – October)
- Heavy Monsoon Rains
(May – July)
- Floods
- Landslides
- Snow Avalanches

GROUP ON EARTH OBSERVATIONS

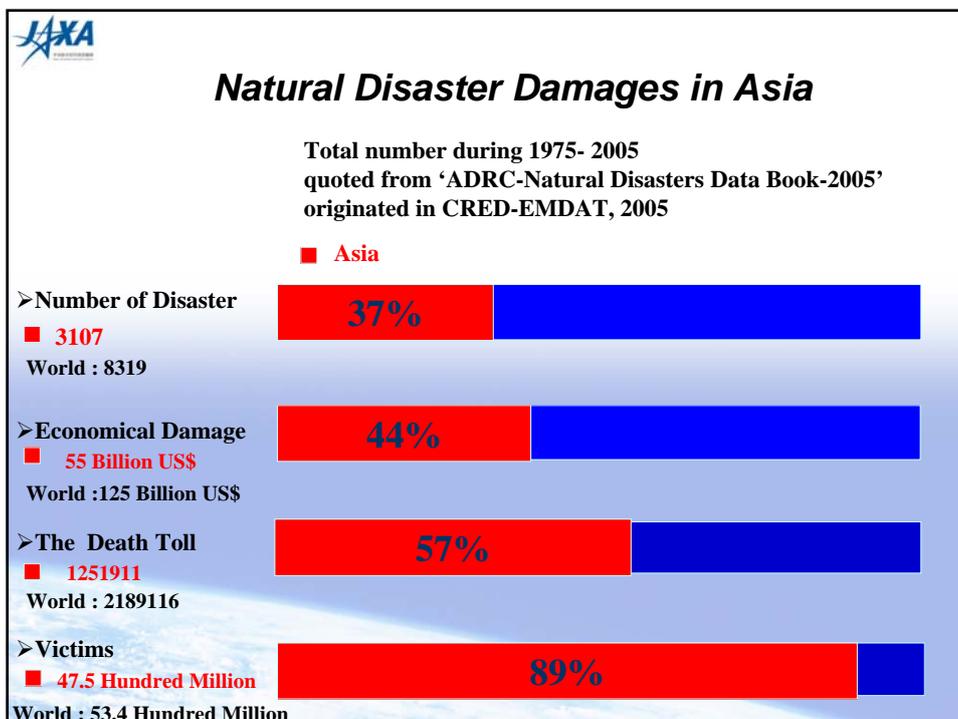

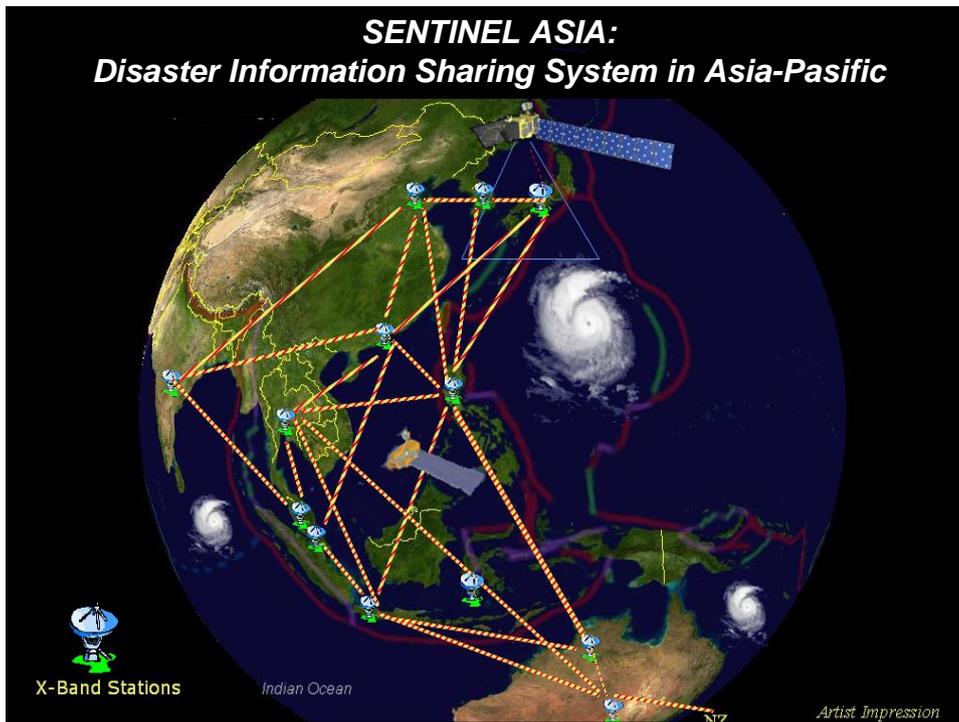

Framework document was adopted:

- This set out nine societal benefit topics to be derived through Global Earth Observation System of Systems, GEOSS.

Nine Societal Benefit Topics

1. Reduction and Prevention of Disasters
2. Human Health
3. Energy Management
4. Climate Change
5. Water Management
6. Weather Forecasting
7. Ecosystem
8. Agriculture
9. Biodiversity

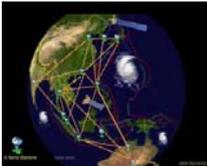

Asia-Pacific Regional Space Agency Forum
<http://www.aprsaf.org/>

APRSAF

Established in 1993 after the Asia-Pacific International Space Year Conference (APIC) in 1992
Enhance the development of space programs in the Asia-Pacific region and promote regional cooperation in the field of space technology and its applications.
 [Participation] Space agencies, related governments, regional and international organizations, institutions responsible for applying space technology.
 [Organizers] MEXT, JAXA and co-host organizations
 > Past co-organizers: Government entities of Mongolia, Malaysia, The Republic of Korea, Thailand, Australia

Sentinel Asia Project
establishing Disaster Management Support System

Working Groups

Earth Observation

Communication Satellite Applications

ISS

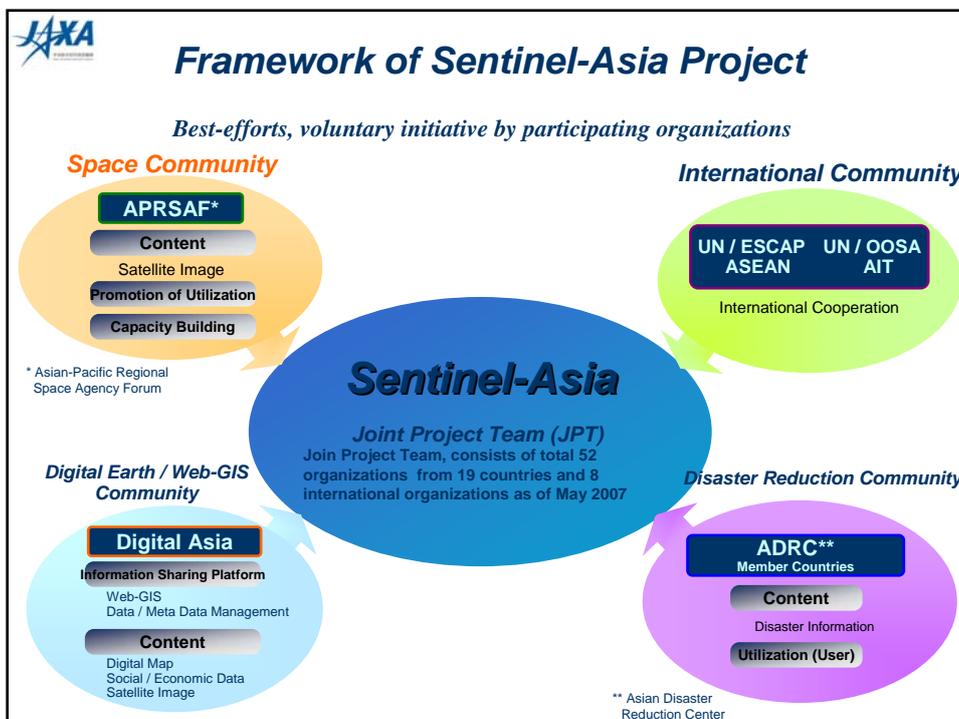

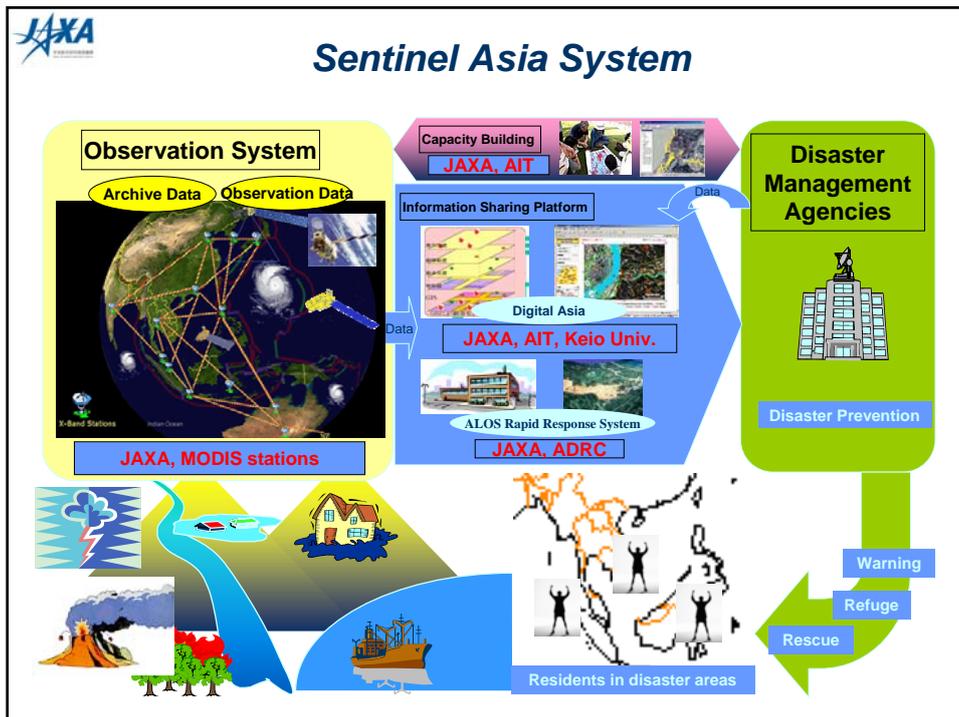

Space Education & Awareness

The 13th Session of APRSAF (APRSAF-13)
 22-24 Nov. 2006 in Jakarta Indonesia

Philosophy

- >> Contribute life first society by ICT and Space technology
- >> Improve speed and accuracy for disaster preparedness and early warning
- >> Minimize victims and social economic losses by natural disaster

Framework

- >> Best-efforts and Voluntary initiative by participating organizations (Satellite data provision)
- >> Capacity building (lecture, hands on training, mini projects)
- >> Knowledge and technology transfer
- >> Working group activity (Forest fire, Flood, ...)
- >> Stepwise approach by reflecting user requirement
- >> Cooperation among space agency and disaster authorities

9

System Operation

- >> Internet based user oriented information sharing platform
- >> 24Hs reception for emergency observation request
- >> Quick dissemination of disaster information/data
- >> WebGIS
- >> Levels of service contents
- >> Variety of data source(satellite, map, photo...)

10

JAXA

ADRC Member Countries

25 Member Countries, 5 Advisor Countries, 1 Observer

Member Countries

- Russian Federation
- Tajikistan
- Kazakhstan
- Mongolia
- Korea Republic Of
- Uzbekistan
- Kyrgyz
- China
- Nepal
- Viet Nam
- Lao People's Democratic Republic
- Philippines
- Armenia
- India
- Bangladesh
- Myanmar
- Cambodia
- Sri Lanka
- Thailand
- Malaysia
- Singapore
- Indonesia
- Papua New Guinea

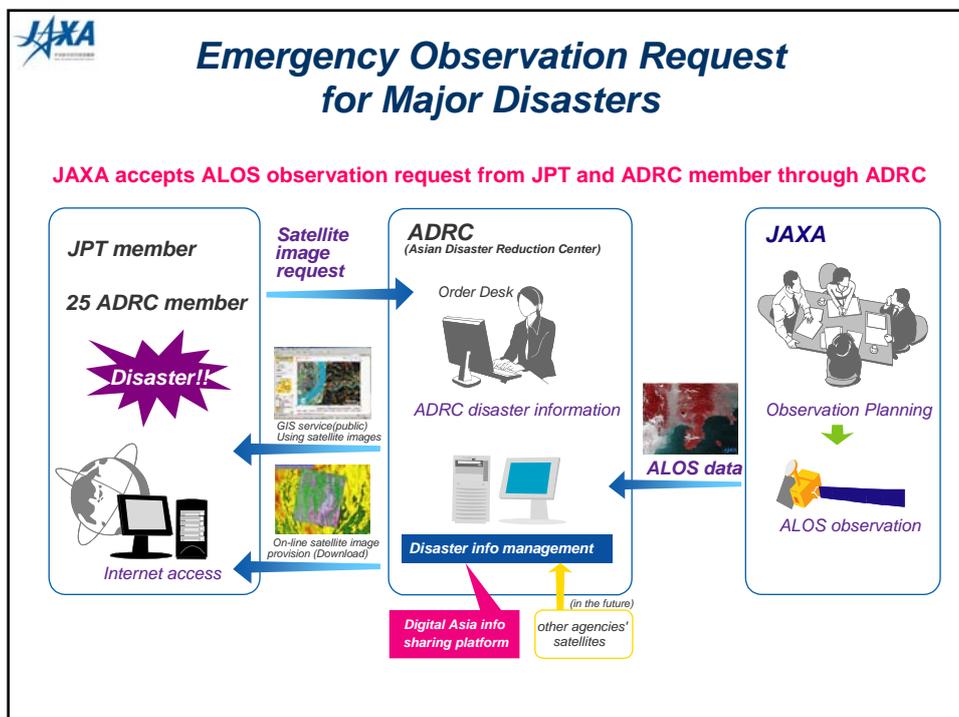

Advisor Countries

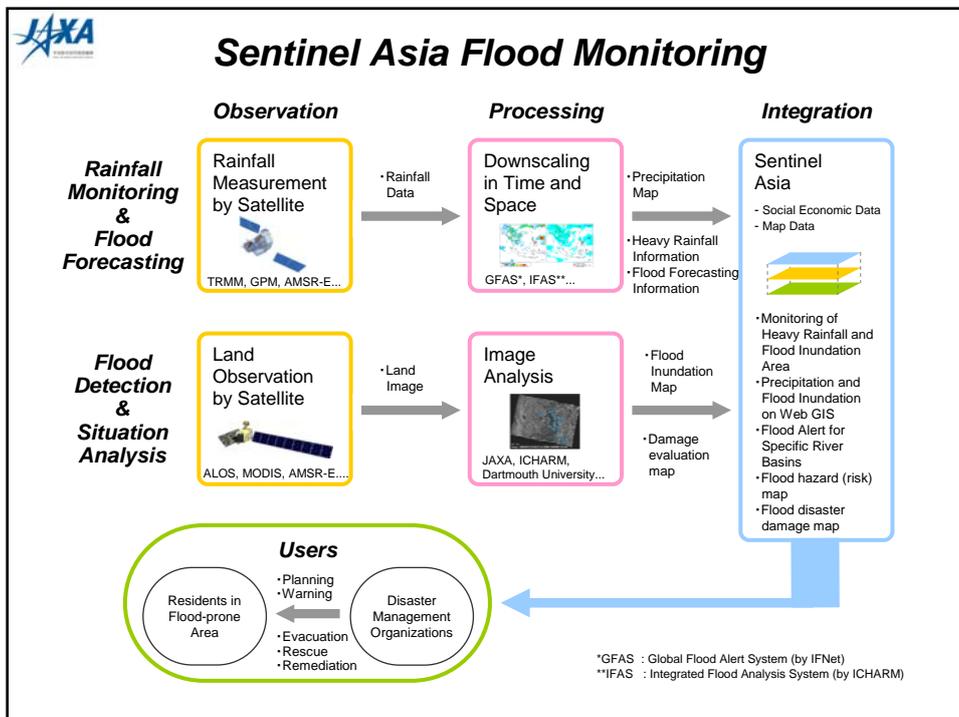

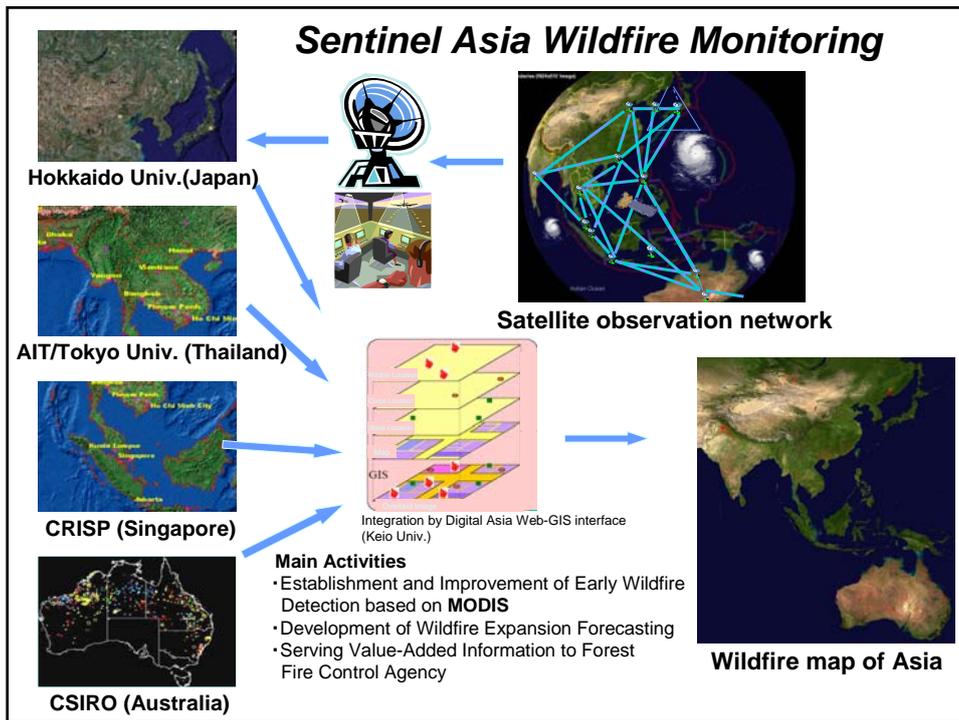

- Australia
- Switzerland
- New Zealand
- France
- U.S.A

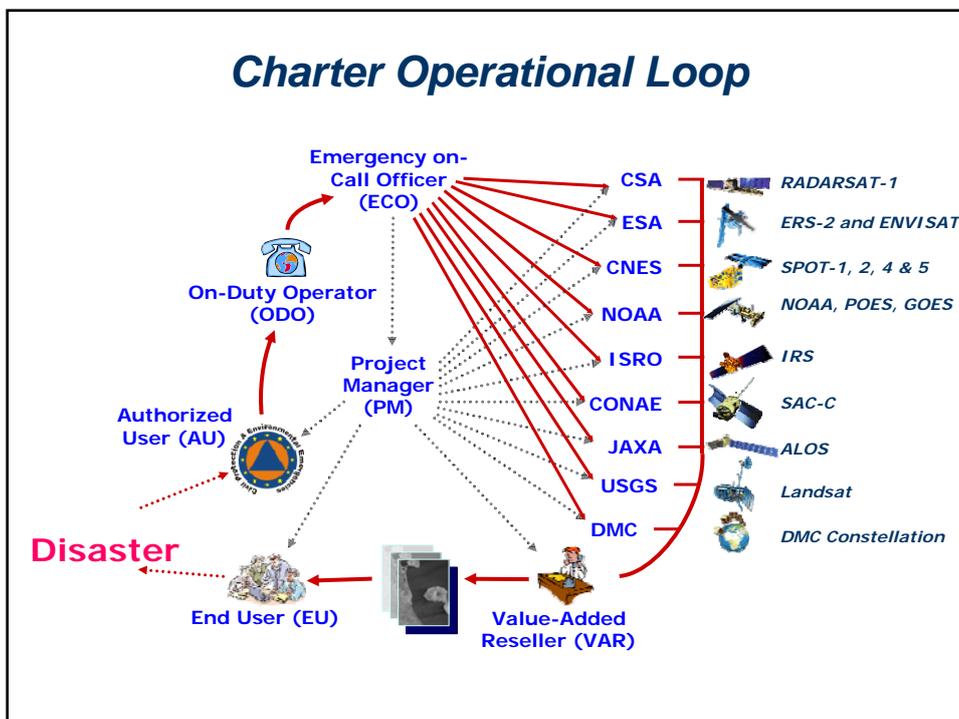

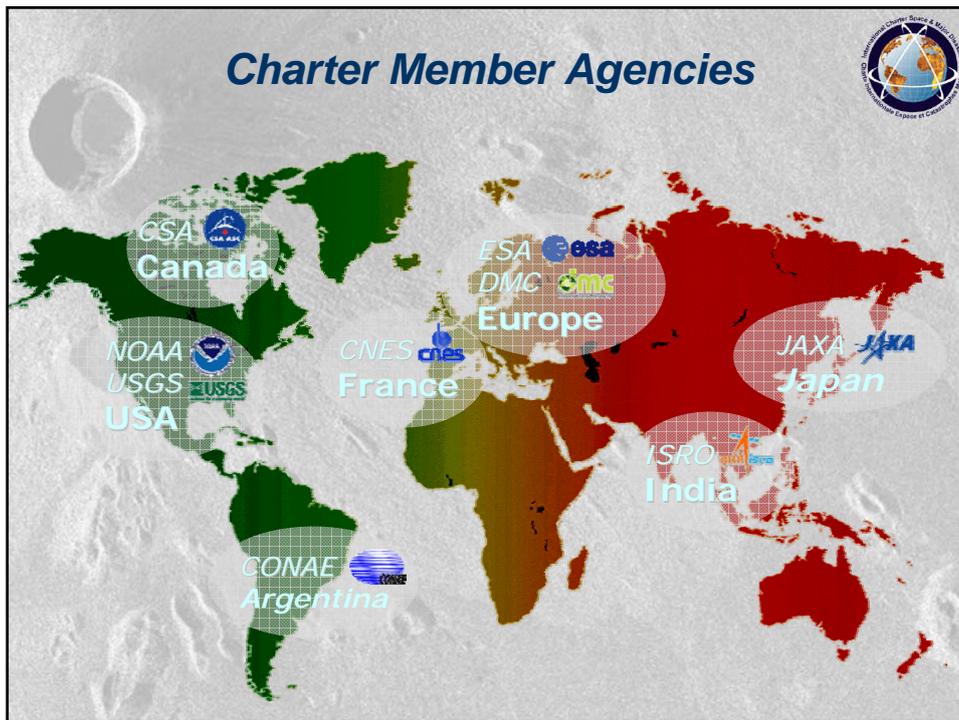

Observer

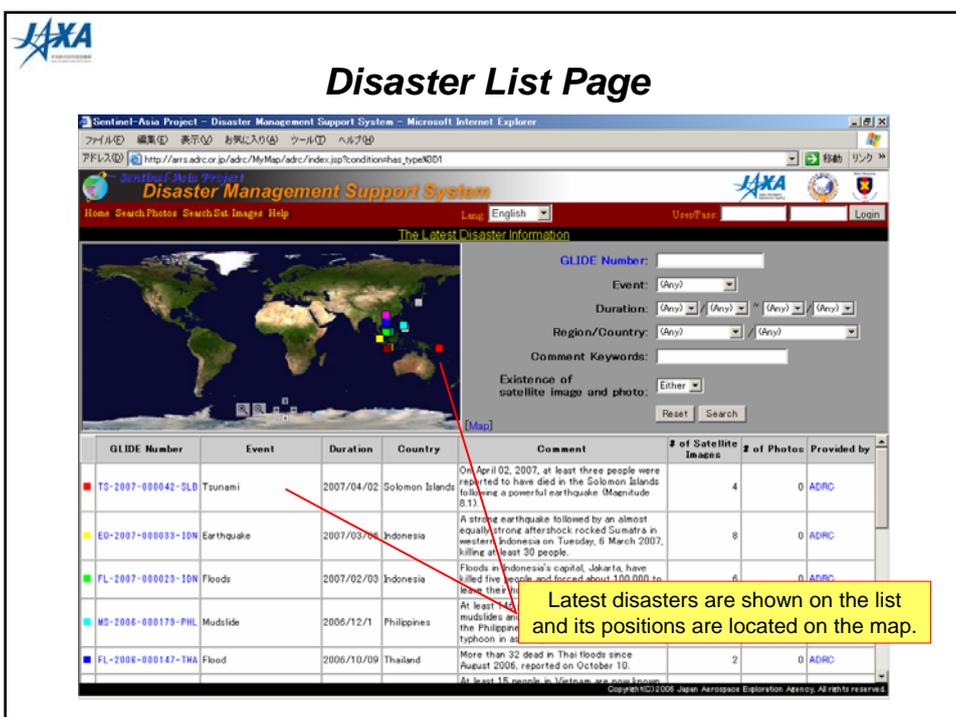

- Pakistan

* Implement Various Projects in cooperation with UN/ISDR, UN/OCHA, UNESCO, UNU, WMO, UN/ESCAP, etc.

Specific Disaster Page

The screenshot displays the 'Disaster Management Support System' interface. At the top, it shows the JAXA logo and navigation links. The main content area is titled 'Disaster Details' and includes the following information:

- GLIDE Number:** TC-2006-000144-VNM
- Event:** Typhoon
- Duration:** 2006/10/01
- Country or District:** Viet Nam

Below this information is a map of Vietnam with a red box highlighting the affected area. To the right of the map is a table of 'Related Recent Photos' with columns for 'Thumbnail', 'Date/Provider/Title', and 'Comments'. Below the map is a table of 'Related Satellite Images' with columns for 'Thumbnail', 'Observation Date/Provider', 'Satellite', 'Sensor', 'Product', and 'Comments'. Red arrows point from yellow callout boxes to these elements:

- 'The comments of this disaster.' points to the 'Comments' column in the 'Related Recent Photos' table.
- 'Photographs of a digital camera and its shot locations.' points to the 'Thumbnail' column in the 'Related Recent Photos' table.
- 'Observed satellite images and its locations.' points to the 'Thumbnail' column in the 'Related Satellite Images' table.

Web GIS Page

The screenshot displays the 'Web GIS Page' interface. At the top, it shows the JAXA logo and navigation links. The main content area is titled 'Satellite Image Details' and includes the following information:

- Observation Date:** 2007/02/05 15:49:44
- Satellite:** ALOS
- Sensor:** PALSAR
- Observation Mode:** FBS-HH
- Flight Direction:** Ascending
- Product:** L1.5
- Pointing Angle:** 41.5
- Scene Center Lat. / Lon.:** -6.2078/105.8626
- Comments:** ALOS/PALSAR, Indonesia, Flood, Observed on Feb. 5, 2007

Below this information is a map of Indonesia with a red box highlighting the affected area. To the right of the map is a table of 'Displayed and Overlaid Data' with columns for 'Map Data', 'Satellite Image (After Disaster)', 'Satellite Image (Before Disaster)', and 'Other Information'. Red arrows point from yellow callout boxes to these elements:

- 'You can zoom up and down to desired scale using slider.' points to the zoom slider on the left side of the map.
- 'You can scroll this map to desired position with drag operation.' points to the map area.

M8.1 Earthquake in Solomon Islands (Apr. 2, 2007)

PALSAR interferometric analysis using acquired data on Mar. 1, 2007 and Apr. 16, 2007.
 34.3 deg. off-nadir angle, FBS HH pol.
 The maximum uplift to satellite direction was measured 2.2m.

M8.1 Earthquake in Solomon Islands (Apr. 2, 2007)

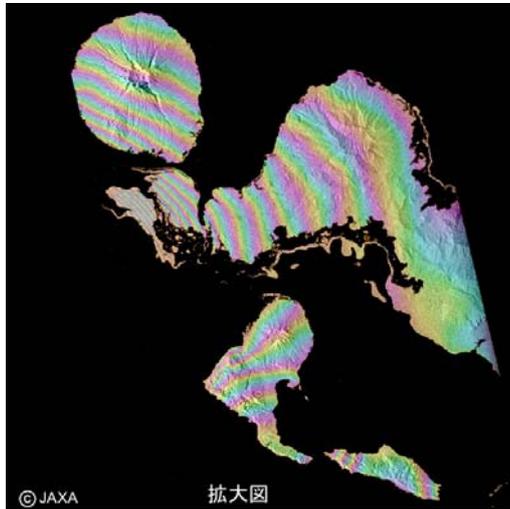

© USGS
http://earthquake.usgs.gov/eqcenter/eqinthenews/2007/us2007aqbk/result/solomon_position.jpg

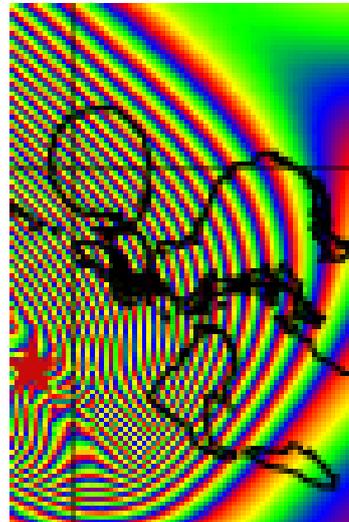

Fault model of the Solomon Island earthquake estimated by USGS after earthquake.

Simulated interferogram (fringe) using surface deformation model inputted USGS fault model.

M8.1 Earthquake in Solomon Islands (Apr. 2, 2007)

Simulated interferogram (fringe) using surface deformation model inputted USGS fault model.

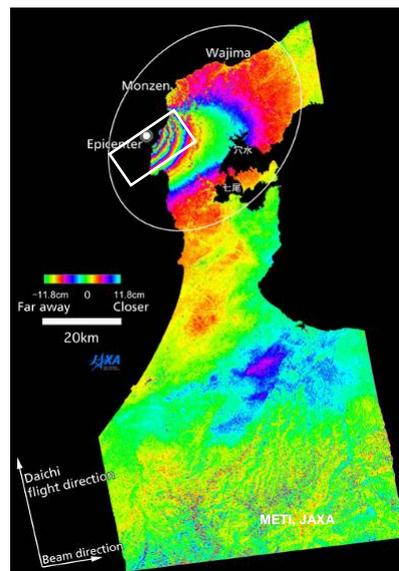

M6.9 Earthquake in Noto Peninsula (Mar. 25, 2007)

平成19年能登半島地震 断層モデルの概念図 資料-5

Fault model estimated by Geographical Survey Institute (GSI), Japan.

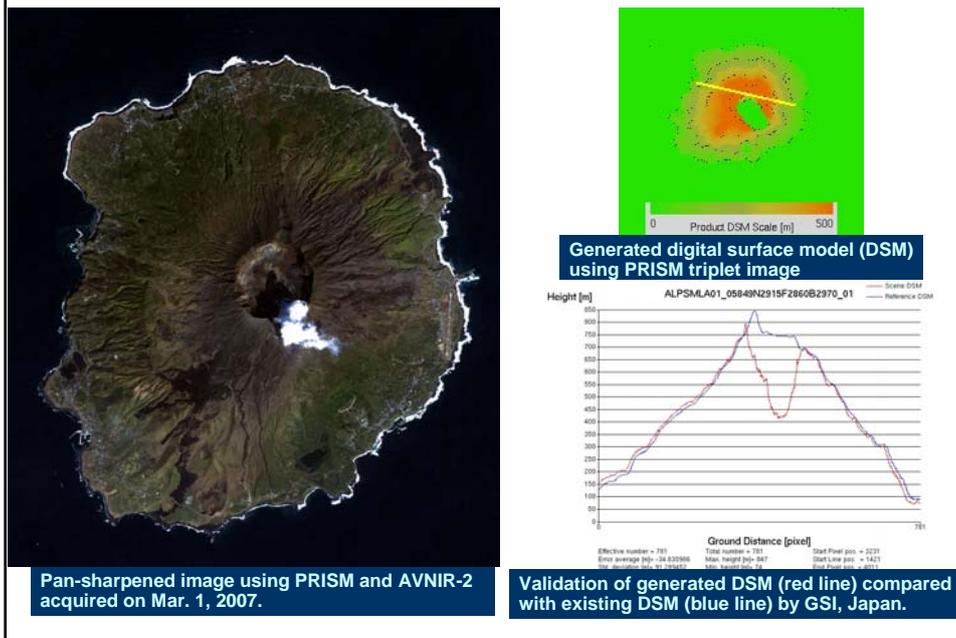

PALSAR differential interferometric (DInSAR) analysis using acquired data on Feb. 23, 2007 and Apr. 10, 2007. The maximum uplift was measured 45cm.

M6.9 Earthquake in Noto Peninsula (Mar. 25, 2007)

Miyakejima Island Volcano, Japan

Miyakejima Volcanic Island, Japan

Mt. Oyama located center part of Miyakejima Island was erupted in 2000, and it is one of active volcano in Japan. We can see lava area due to eruption, and mud-control dam. The northern part of crater could not generated DSM due to shadow of smoke. This kinds of image will be useful as a hazard map and restoration.

3D view of Miyakejima Island generated by overlaying PRISM DSM with pan-sharpened image of PRISM and AVNIR-2. Mar. 1, 2007.

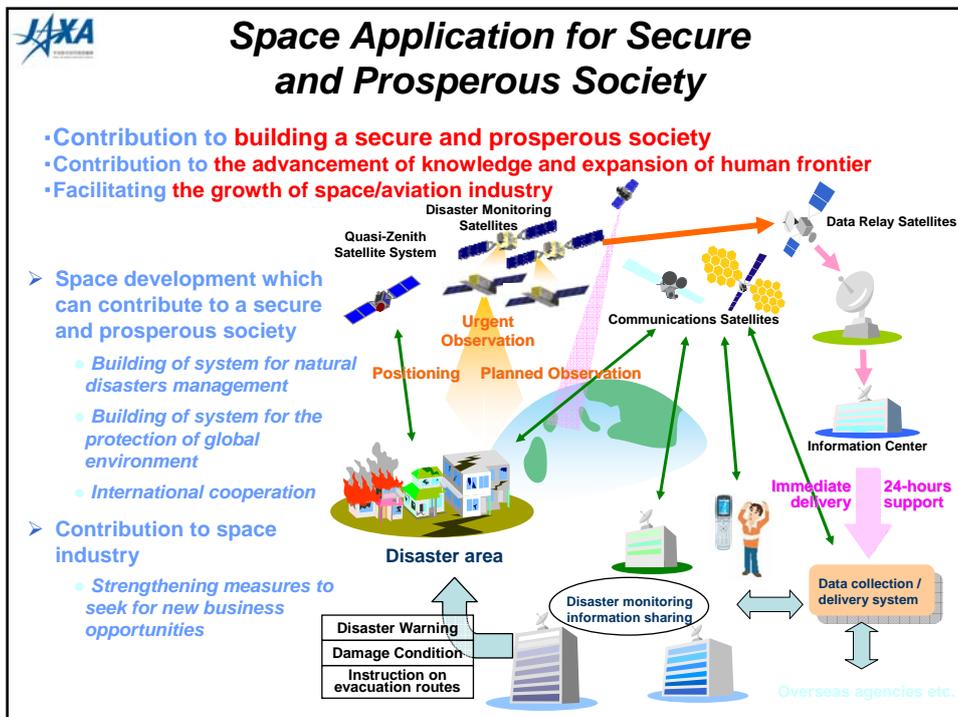

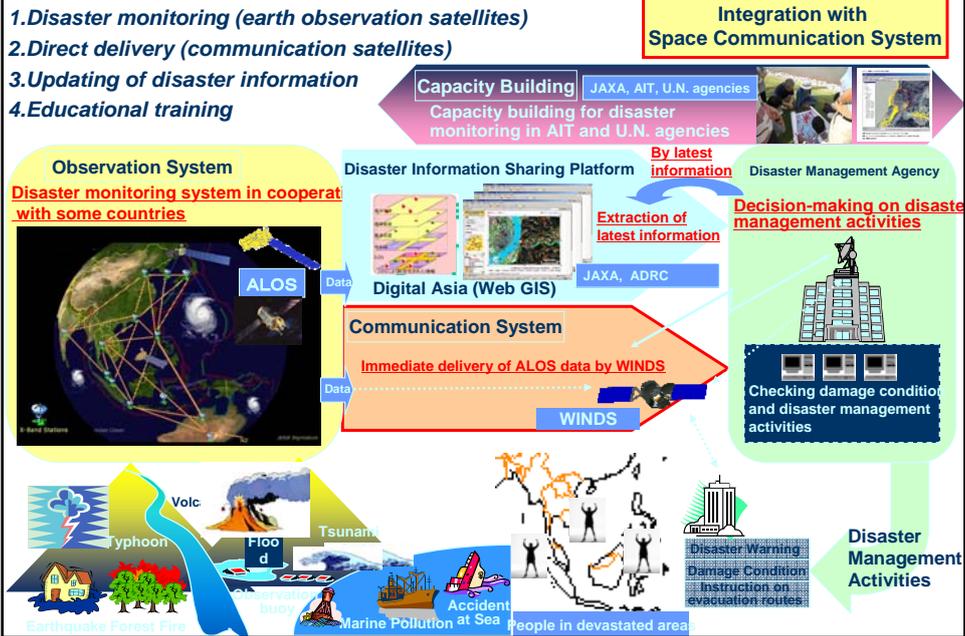

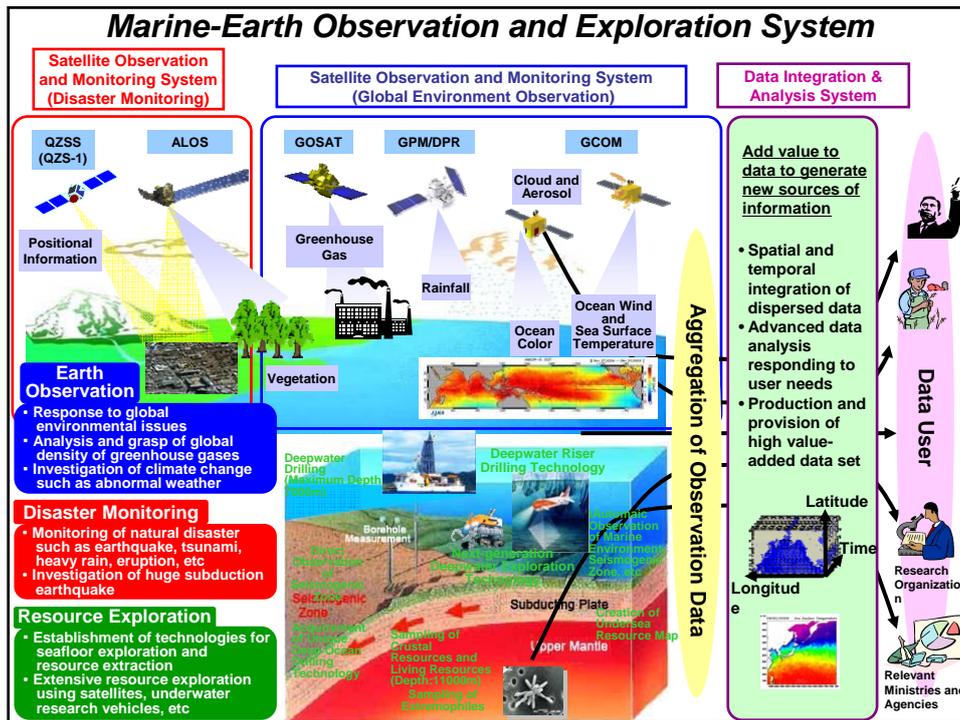

3D view of Miyakejima Island before 2000 created from geographical map by Geographical Survey Institute of Japan.

Miyakejima Volcanic Island, Japan

Disaster and Risk Management System in Asia

Conclusion

- Contribution to a secure and prosperous society utilizing earth observation satellites and communications satellites in cooperation with Asian countries.
- Support for utilize disaster authorities in Asia pacific through Sentinel Asia.
- Support for education and capacity building to operate a total system.
