

Session 2: *Enhancement of global disaster data*

Yuichi ONO (Ph.D.)

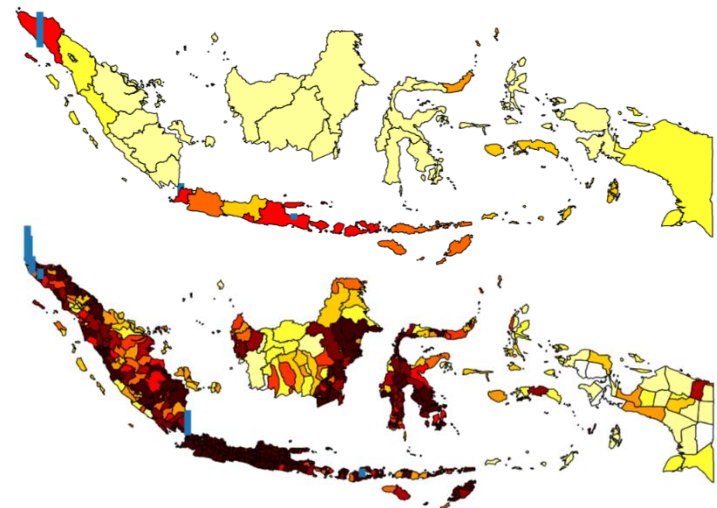

Professor,
International Research Institute of Disaster Science (IRIDeS), Tohoku University, Sendai, Japan

Director, Global Centre for Disaster Statistics

Why disaster data/statistics?

Sample of Database in Sri Lanka (DesInventar platform)

Sample of Database in Indonesia (modified DesInventar platform)

Data/Statistics is a key to the governance

- Land Survey and Taxation
- Colonial Management – Development of Geography in Europe
- Know the land well for better governance
- Same for disaster risk reduction

For reducing disaster risks, we need to know the disaster risks as precisely as possible

What disaster happened in the past is not even clear yet now.
How come we could predict well for the future?

For monitoring the Sendai Framework's global targets, sound disaster damage and loss data/statistics is crucial.

We need to target the 'Target (e)' as it must be achieved by 2020.

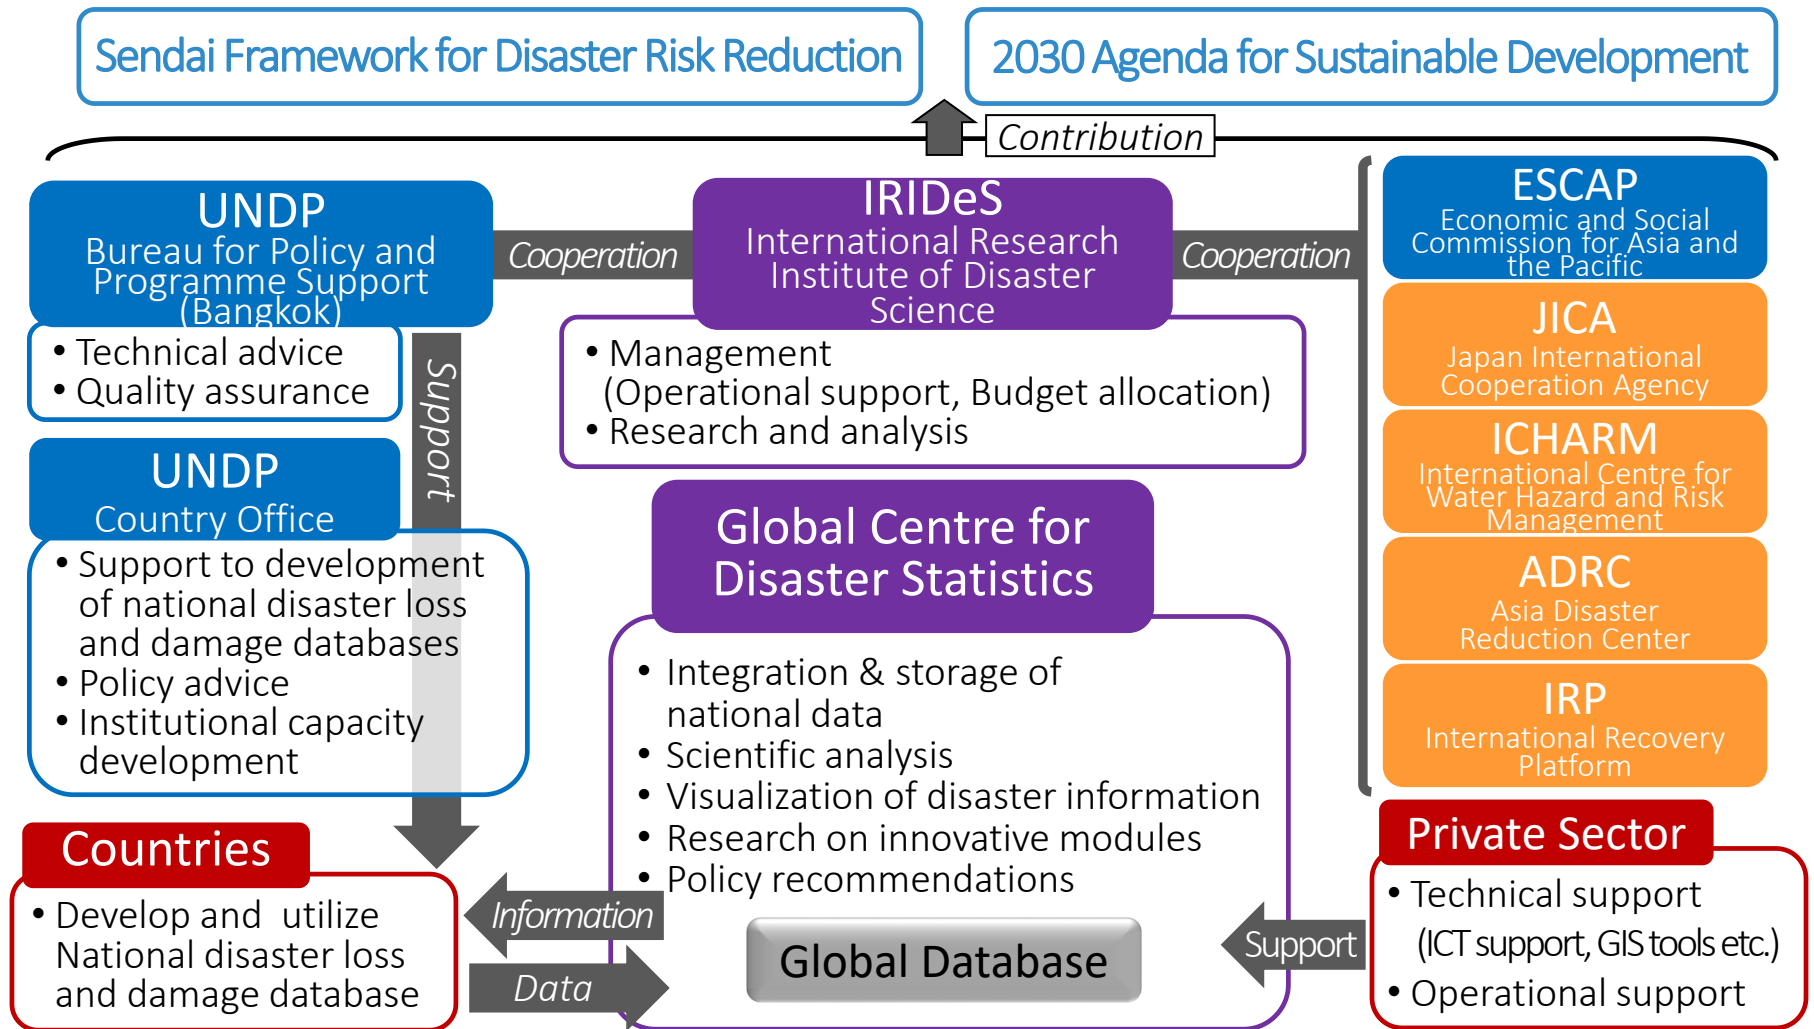

Target (e): Substantially increase the number of countries with national and local disaster risk reduction strategies by 2020

And

Developing a national disaster damage and loss system itself is to develop a concrete DRR strategy at the national and local level

Global Centre for Disaster Statistics

- Relationship of the centre and related organization/agencies

Global Centre for Disaster Statistics

- UNDP
 - Has been supporting governance in DRR; development of disaster loss database in more than 30 countries
 - Country based support is available with strong relationship between government and related agencies in developing countries
- IRIDeS
 - Analytical capacity: 100 DRR experts in more than 37 academic disciplines and capable to analyze data
 - Centre's secretariat function
- Fujitsu
 - Technical support, Expertise in ICT, Global Database through the cloud-base system, supporting the GCDS secretariat
- Pacific Consultants
 - Analytical capacity: Macroeconomic analysis, etc. supporting the GCDS secretariat
- JICA
 - Capacity building and conducting DRR Projects in many countries
- ADRC
 - GLIDE

- If you do not know the past, you cannot predict the future.

For generating effective DRR policy, you must look for foundation based on evidence.

You would not want to generate DRR policy based on data depending outside of your country.

Historical records and disaster damage and loss data are national treasures.

➤ Challenges in obtaining data

NDMOs are not necessarily a strong agency in terms of power and budget in many countries

NDMOs must ask data from other agencies or local government (horizontal and vertical coordination is necessary)

Would they be very collaborative?

SFDRR might not be popular beyond NDMOs

➤ Recommendations

Take advantage of the SFDRR linkage with SDGs

Ask for the SDGs monitoring coordination at the highest level of your country

Not NDMOs to coordinate the task but the highest level of the government such as SDGs Task Force Team, etc.

UN/ISDR, UNDG/UNSD, and UNFCCC would need to generate a common policy to make a better synergy for monitoring the SFDRR, SDGs, and Paris Agreement

Raise your voice now!

World BOSAI Forum

Spin disaster knowledge to
Weave BOSAI wisdom

2nd Nov.9-12, 2019
IDRC 2019 in SENDAI JAPAN

| Venue | Sendai International Center/
Kawauchi Hagi Hall, Tohoku University

***BOSAI** is a traditional Japanese term, indicating a holistic approach to reduce human and economic losses from disasters, which represents activities in all disaster phases, including prevention, recovery, response and mitigation.*
