Flood Situation Report - 2001

(Based on the reports received from concerned Departments/State Govts.)

Impact of Southwest Monsoon - 2001:

- “ Several parts of the Country receive heavy rainfall during the South West Monsoon resulting in floods, landslide, loss of human life and cattle, disruption of all communication network, damages to houses and property and dislocation of normal activities.
- “ During the last season of Southwest monsoon, many parts of the country witnessed heavy floods / rains and thousands of human life and cattle lost. The flash floods in Himachal Pradesh, Arunachal Pradesh, Andhra Pradesh, UP, Bihar, West Bengal etc. took hundreds of human lives and caused immense damage to properties during 2000.
- “ Keeping in view the past experience during June-September during the Southwest monsoon, States/UTs and concerned Central Government Departments/ Ministries were requested to take necessary precautionary/preventive measures and advance planning to combat any serious situation.

IMD's forecast & report:

- “ India Meteorological Department (IMD) has Stated that there was good pre-monsoon rainfall activity over most parts of the Country during this year. The cumulative rainfall for the period March 1, 2001 to May 31, 2001 has been normal to excess over 27 meteorological subdivisions of the country.
- “ IMD's long range official forecasts for the rainfall during 2001-Southwest monsoon season are as follows:
 - a) In 2001, the rainfall for the Southwest monsoon (June to September) for the country as a whole is likely to be normal, thus making the year 2001 the 13th normal monsoon year in succession. The normal is defined as rainfall within + 10% of its long period average.
 - b) Quantitatively, the rainfall over the country during the season is likely to be 98% of its long period average with an estimated model error of + 4%.

c) Over the three broad homogenous regions of India, the rainfall for the season is likely to be 100% of its long period average (LPA) over Northwest India, 96% of the LPA over the Peninsula and 100% of the LPA over Northeast India with an estimated model error of + 8%.

For details on IMD's forecast please visit www.imd.ernet.in
